

Day -4 : Resolve Connectivity Issue

Task 1: Setting Up a USB Webcam

Plug in a USB webcam, install the software (drivers) it needs, and take a photo to make sure it works.

Steps Taken

- 1. Plugged in the camera: Connected the webcam cable to a USB port on the computer.**
- 2. Installed the software: Let Windows automatically detect the camera and install the necessary driver files.**
- 3. Tested the camera:**
 - **Opened the default Camera app on the computer.**
 - **Confirmed that the video was clear and working.**
 - **Took a test photo to prove it works properly.**

Task 2: Setting Up a Printer & Printing a Test Page

Connect a local printer, set up its drivers, and print a test page.

Steps Taken

- 1. Connected the printer: Plugged the printer into the PC using a USB cable and turned the printer power ON.**
- 2. Added the printer:**
 - **Opened Settings > Printers & Scanners.**

- **Clicked Add a printer or scanner and selected the printer from the list to let Windows install it.**

3. Printed a test page:

- **Clicked on the installed printer and selected Manage.**
- **Clicked Print a test page and checked that the page printed cleanly with clear text.**

Task 3: Fixing a Printer Connection Problem

Simulate a disconnected printer and use Device Manager to find and fix the issue.

Steps Taken

1. Disconnected the printer: Unplugged the USB cable to create an error. The printer status changed to "Offline".

2. Checked Device Manager:

- **Pressed Win + X and opened Device Manager.**
- **Looked under Print queues to see if the printer was missing or showing an error icon.**

3. Fixed the problem:

- **Plugged the USB cable back in firmly.**
- **Clicked Action at the top menu and selected Scan for hardware changes.**
- **The printer refreshed and went back to "Online / Ready".**

Task 4: Fixing Webcam Issues in Zoom

Fix an issue where the webcam works in the regular Camera app, but shows a black screen in Zoom.

Why it Happens

- **The camera is busy: Only one app can use the webcam at a time. If the Camera app is open, Zoom cannot access it.**
- **Permissions are off: Windows privacy settings might be blocking Zoom from using the camera.**

Steps to Fix It

1.Close other camera apps:Step 1.

Close the regular Camera app or any other app using video.

2.Turn on Windows permissions:Step 2.

Go to Settings > Privacy > Camera and make sure both "Allow access to the camera" and "Allow desktop apps to access your camera" are turned ON.

3.Select the camera in Zoom:Step 3.

Open Zoom, go to Settings > Video, and make sure your external webcam is selected in the Camera dropdown menu.

4.Test it:Step 4.

Start a Zoom test call to confirm the video is working in both apps now.
