

Day -5 : Operating System & Installation

Assignment

Task 1: Windows System Information

Access the Windows System Information utility and verify key hardware and operating system details.

Steps Taken

1. Pressed Win + R, typed msinfo32, and pressed **Enter** to open **System Information**.
2. Verified the system specifications under the **System Summary** tab:
 - **OS Name / Version:** Microsoft Windows 11 Home
 - **Processor:** AMD Ryzen™ 7 7735HS
 - **Installed Physical Memory (RAM):** 16.0 GB (or 32.0 GB)

Task 2: Creating a Bootable USB Drive

Download an official Linux ISO and turn a USB flash drive into a bootable installer using Rufus.

Steps Taken

1. **Downloaded ISO:** Downloaded the latest **Ubuntu Desktop ISO** from the official Ubuntu website.
2. **Downloaded Rufus:** Downloaded and launched **Rufus** on Windows.
3. **Flashing Process:**
 - Plugged in a 16GB USB flash drive.
 - Selected the USB drive under **Device**.
 - Clicked **Select** and chose the downloaded Ubuntu ISO file.
 - Set Partition Scheme to **GPT** and Target System to **UEFI**.
 - Clicked **Start** and waited for the process to complete successfully.

Task 3: Configuring Language & Wallpaper Settings in macOS

Change the desktop wallpaper and modify system display languages on a macOS system/virtual machine.

Steps Taken

1. Wallpaper Change:

- Opened **System Settings** (or *System Preferences*).
- Selected **Wallpaper** from the sidebar and chose a new desktop background.

2. Language Configuration:

- Navigated to **System Settings > General > Language & Region**.
- Clicked the + icon under **Preferred Languages**.
- Selected **Hindi (हिन्दी)** / **Gujarati (ગુજરાતી)** and clicked **Add**.
- Moved the chosen language to the top of the list as the primary system language.

Task 4: Ubuntu Linux Installation & Auto-Login Setup

Install a fresh instance of Ubuntu, create a user named gamer, and enable automatic login.

Steps Taken

1. Installation & Account Setup:

- Booted into the Ubuntu installer via VirtualBox (or USB drive).
- Proceeded through the installation steps and configured the primary user as **gamer**.

2. Auto-Login Enable:

- After installation, navigated to **Settings > Users**.
- Unlocked settings by entering administrative privileges.
- Toggled **Automatic Login** to **ON** for the gamer account.

3. Verification:

- Restarted the system to confirm auto-login bypasses the password screen into the gamer desktop session.

Task 5: Windows 10 Installation Guide & Feedback (ASUS TUF A16)

Step-by-Step Installation Guide

1. **Preparation:** Create a Windows 10/11 USB installation drive using the official Media Creation Tool. Plug it into the ASUS TUF A16.
2. **Boot Options:** Turn on the laptop and tap F2 repeatedly to enter the BIOS, or tap F12 / ESC to open the Boot Menu. Select the USB drive.
3. **Partitioning:**
 - Select **Custom: Install Windows only (advanced)**.
 - Delete existing partitions if performing a clean install, or select the target SSD drive and click **New** to create system partitions.
4. **Privacy & Setup:** Turn off optional telemetry, advertising ID, and location tracking toggles during the out-of-box experience (OOBE).
